

## PROGRAMME DESCRIPTION

The Master of Medicine (Psychiatry) programme will assist students in strengthening their comprehension of the neuroscientific underpinnings of psychiatry, developing their critical thinking and research design skills, enhancing their clinical competence, creating interdisciplinary clinical and research networks, and pursuing research. This programme seeks to generate competitive medical professionals with high ethical standards and the analytical abilities needed to make judgments about mental health.

## PROGRAMME AIM

Candidates should be able to do the following by the end of the programme:

- Empower and use psychiatry and related medical knowledge in the diagnosis and management of individuals with psychological illnesses through thorough and thorough assessment.
- Exhibit a positive attitude, strong communication skills, and a feeling of responsibility not only toward professional peers and other team members in the mental and physical health care field but also toward patients, family members, and other members of the community.
- Serve as an effective consultant who possesses strong leadership qualities, humanistic ideals, and ethical principles to raise the bar for mental health care in society.
- Engage in lifelong learning in the fields of psychiatry and the associated medicine.

## CAREER OPPORTUNIT

The Master of Medicine (Psychiatry) is specifically designed for future psychiatrists. The careers they can consider with their degree include some of the ones listed below:

- Psychiatry Specialists
- Child and Adolescent Psychiatrist
- Forensic Psychiatrist
- Behavioral Specialist
- Neuropsychiatrist
